

HASAN HAZIRBULAN

COMPUTER ENGINEER

4740.st, Günlaltay, İzmir | hasanhazirbulan@gmail.com | github.com/hasanhazirbulan |
https://www.linkedin.com/in/hasanhazirbulan/

SUMMARY

Computer Engineering student focused on AI-powered mobile applications and intelligent systems. Experienced in developing cross-platform and iOS applications using Flutter and SwiftUI, with hands-on implementation of deep learning and NLP models using PyTorch. Strong interest in scalable software architecture, applied machine learning, and AI-driven productivity solutions.

PROFESSIONAL EXPERIENCE

Internship, LIMBIC Apps & Software

Jul 2024- Aug 2024

- Developed AI-integrated iOS applications using Swift and SwiftUI, implementing ML algorithms directly in mobile environments.
- Applied software engineering best practices including code review, version control with Git, and agile development workflows.

Oct 2023- Jul 2024

Google Game and Application Academy Scholar

- Selected among top applicants nationwide for this competitive program focused on mobile application and game development.
- Completed advanced training in software architecture, project management, and emerging technologies including AR/VR and AI-driven game design.

PROJECTS

Learn.inc: AI-Powered Student Productivity Application

Sep 2024 - Jan 2025

- Co-developed a cross-platform mobile application integrating advanced AI for automated study material summarization and personalized quiz generation.
- Implemented NLP pipelines using PyTorch for extractive/abstractive summarization and context-aware question generation from lecture notes and PDFs.
- Designed the application's multi-feature architecture, combining productivity tracking, AI content tools, and an adaptive study assistant into a single cohesive platform.

JobSwipe — AI-Powered Job Matching Platform

Sep 2025 -

- Architected a full-stack, mobile-style web application with swipe-based job discovery (Tinder-style UX) using React 19, TypeScript, and Framer Motion.
- Integrated Google Gemini AI to power interview preparation and an ATS CV scoring system, generating AI-driven questions, resume-job alignment analysis, and structured improvement feedback.
- Designed a scalable role-based architecture supporting job seekers and recruiters, including smart search, real-time chat, job alerts, candidate discovery, and 20+ production-level screens.

SKILLS

Languages: Python, Java, C/C++

Frontend: React 19, TypeScript

Mobile: Flutter, SwiftUI

AI/ML: PyTorch, NLP, LangChain,

Tools: Git, Firebase, Agile

EDUCATION

West Pomeranian University Of Technology

March 2025 - July 2025

Erasmus Exchange Student-Computer Science

Izmir Katip Çelebi University

Sep 2021 - June 2026

Computer Engineering

Bornova Anatolian High School

Sep 2017 - Jun 2021

ADDITIONAL INFORMATION

Languages: English (Fluent) | German (Basic) | Polish (Basic)

Certifications:

- Web Development Workshop with Django
- Google Project Management (Coursera)
- Pupilica - Artificial Intelligence and Data Science
